	The MAILING DATE of this communication app	l	l			
Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status						
1)⊠	Responsive to communication(s) filed on 16 Au	iaust 2007				
	·	action is non-final.				
′=	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is					
-,	closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 5, 7, 9,11, 13, 16, 19 and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Miyamoto (5,080,474).

The Miyamoto reference teaches an apparatus for scanning materials, note entire reference. The reference teaches a laser source, a cylindrical lens for converging the width direction. There is a light guide for creating a homogenous energy distribution. The bean is made to be a line shape and irradiates a surface. There is also a light guide comprising two reflective surfaces, note figures. The width light guides and lens are movable to change the width direction. One of ordinary skill in the art would inherently create a uniform width of laser power by the placement of the movable width lens and guides.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 25 to 37, 39, 41, 42, 44, 45 and 47-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyamoto (5,080,474) in view of Tanaka (6,393,042)

The Miyamoto reference is relied on for the same reasons as stated, supra, and differs from the instant claims in the processing. However, the Tanaka reference teaches a method and apparatus for laser scanning amorphous semiconducting material, note entire reference. The laser scanner comprises a laser source such a YAG or Ar laser. The beam travels through a homogenizer to create a linear bean, note figure 1. The bean then hits the amorphous materials, which is on a movable stage. The laser can be an eximer laser. The beam crystallizes the amorphous material such as silicon, note examples. It would have been obvious to one of ordinary skill in the art to modify the Miyamoto reference by the teachings of the Tanaka et al reference to use eximer lasers and process semiconductors in order to optimumize the laser intensity and in order to increase the performance of the laser decreasing scanning times.

Response to Arguments

Applicant's arguments with respect to claims pending have been considered but are most in view of the new ground(s) of rejection.

Art Unit: 1792

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert M. Kunemund whose telephone number is 571-272-1464. The examiner can normally be reached on 8 hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yogendra Gupta can be reached on 571-272-1312. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
